

SNPviz App

For SNP data visualization

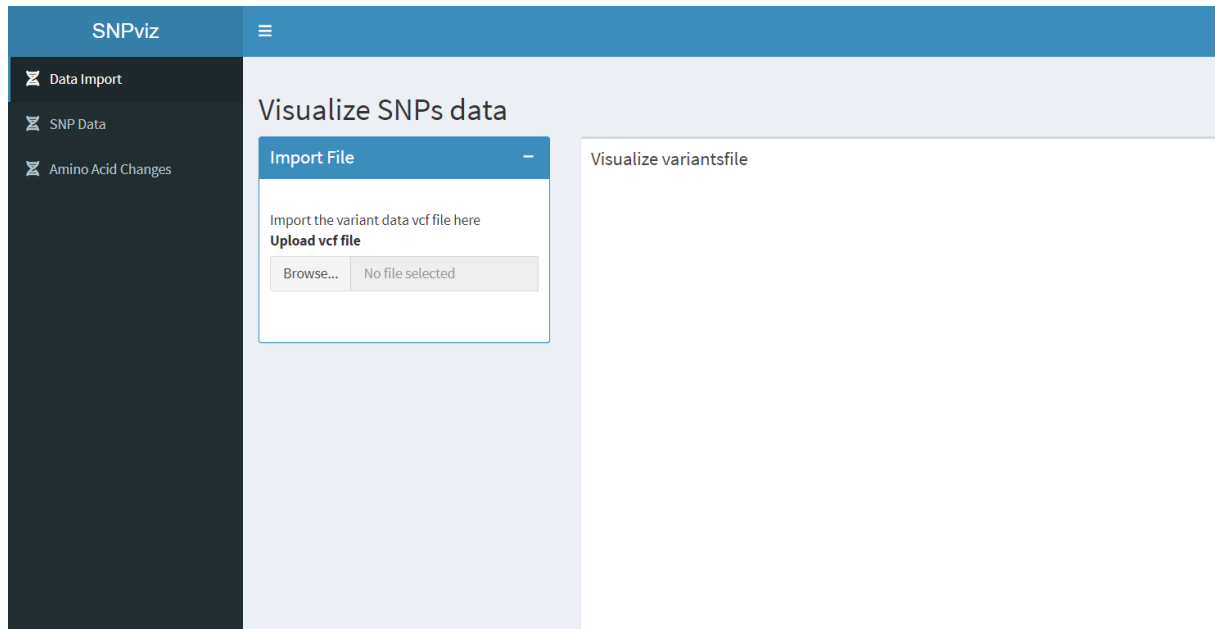

Figure 1: SNPviz app interface. The user is required to import a csv file for SNP calls

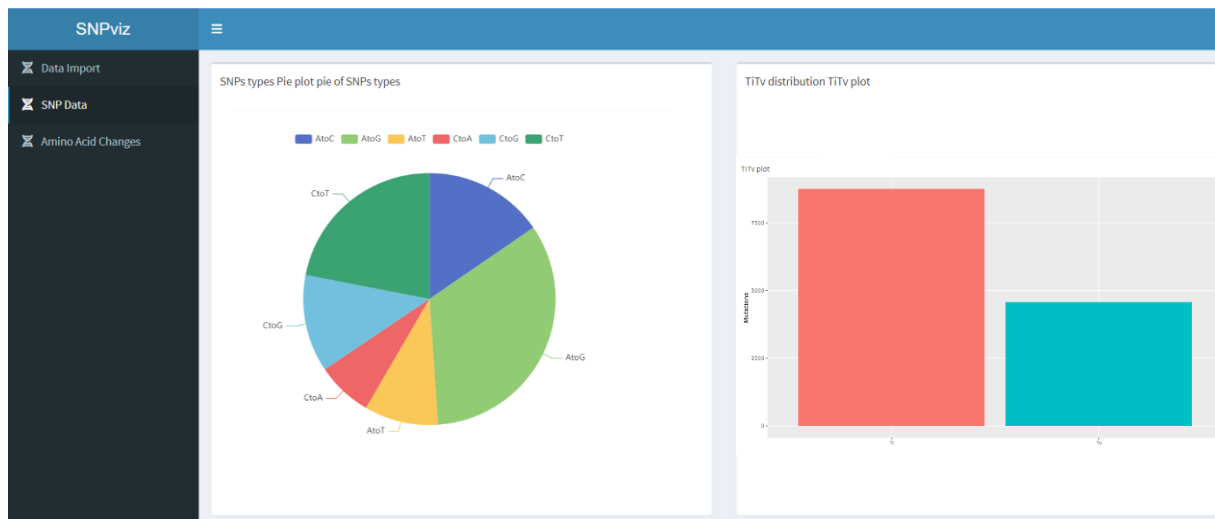

Figure 2: SNP types are determined in comparison with the reference genome and then are represented in a pie plot. Transition (Ti) and Transversion (Tv) distribution are represented in a barplot

Figure 3: The Trinucleotide motif analysis results are represented in a barplot showing the trinucleotide distributions

Figure 4: Plot for the amino acid changes
